

IMO Shortlist 2007

— Algebra

1 Real numbers a_1, a_2, \dots, a_n are given. For each i , ($1 \leq i \leq n$), define

$$d_i = \max\{a_j \mid 1 \leq j \leq i\} - \min\{a_j \mid i \leq j \leq n\}$$

and let $d = \max\{d_i \mid 1 \leq i \leq n\}$.

(a) Prove that, for any real numbers $x_1 \leq x_2 \leq \dots \leq x_n$,

$$\max\{|x_i - a_i| \mid 1 \leq i \leq n\} \geq \frac{d}{2}. \quad (*)$$

(b) Show that there are real numbers $x_1 \leq x_2 \leq \dots \leq x_n$ such that the equality holds in (*).

Author: Michael Albert, New Zealand

2 Consider those functions $f : \mathbb{N} \mapsto \mathbb{N}$ which satisfy the condition

$$f(m+n) \geq f(m) + f(f(n)) - 1$$

for all $m, n \in \mathbb{N}$. Find all possible values of $f(2007)$.

Author: Nikolai Nikolov, Bulgaria

3 Let n be a positive integer, and let x and y be a positive real number such that $x^n + y^n = 1$. Prove that

$$\left(\sum_{k=1}^n \frac{1+x^{2k}}{1+x^{4k}} \right) \cdot \left(\sum_{k=1}^n \frac{1+y^{2k}}{1+y^{4k}} \right) < \frac{1}{(1-x) \cdot (1-y)}.$$

Author: Juhan Aru, Estonia

4 Find all functions $f : \mathbb{R}^+ \rightarrow \mathbb{R}^+$ satisfying $f(x + f(y)) = f(x + y) + f(y)$ for all pairs of positive reals x and y . Here, \mathbb{R}^+ denotes the set of all positive reals.

Proposed by Paisan Nakmahachalasint, Thailand

- 5 Let $c > 2$, and let $a(1), a(2), \dots$ be a sequence of nonnegative real numbers such that

$$a(m+n) \leq 2 \cdot a(m) + 2 \cdot a(n) \text{ for all } m, n \geq 1,$$

and $a(2^k) \leq \frac{1}{(k+1)^c}$ for all $k \geq 0$. Prove that the sequence $a(n)$ is bounded.

Author: Vjekoslav Kova, Croatia

- 6 Let a_1, a_2, \dots, a_{100} be nonnegative real numbers such that $a_1^2 + a_2^2 + \dots + a_{100}^2 = 1$. Prove that

$$a_1^2 \cdot a_2 + a_2^2 \cdot a_3 + \dots + a_{100}^2 \cdot a_1 < \frac{12}{25}.$$

Author: Marcin Kuzma, Poland

- 7 Let n be a positive integer. Consider

$$S = \{(x, y, z) \mid x, y, z \in \{0, 1, \dots, n\}, x + y + z > 0\}$$

as a set of $(n+1)^3 - 1$ points in the three-dimensional space. Determine the smallest possible number of planes, the union of which contains S but does not include $(0, 0, 0)$.

Author: Gerhard Wglinger, Netherlands

— Combinatorics

- 1 Let $n > 1$ be an integer. Find all sequences $a_1, a_2, \dots, a_{n^2+n}$ satisfying the following conditions:

$$(a) \ a_i \in \{0, 1\} \text{ for all } 1 \leq i \leq n^2 + n;$$

$$(b) \ a_{i+1} + a_{i+2} + \dots + a_{i+n} < a_{i+n+1} + a_{i+n+2} + \dots + a_{i+2n} \text{ for all } 0 \leq i \leq n^2 - n.$$

Author: Dusan Dukic, Serbia

- 2 A rectangle D is partitioned in several (≥ 2) rectangles with sides parallel to those of D . Given that any line parallel to one of the sides of D , and having common points with the interior of D , also has common interior points with the interior of at least one rectangle of the partition; prove that there is at least one rectangle of the partition having no common points with D 's boundary.

Author: Kei Irie, Japan

- 3 Find all positive integers n for which the numbers in the set $S = \{1, 2, \dots, n\}$ can be colored red and blue, with the following condition being satisfied: The set $S \times S \times S$ contains exactly 2007 ordered triples (x, y, z) such that:

- (i) the numbers x, y, z are of the same color,
- and
- (ii) the number $x + y + z$ is divisible by n .

Author: Gerhard Wginger, Netherlands

- 4 Let $A_0 = (a_1, \dots, a_n)$ be a finite sequence of real numbers. For each $k \geq 0$, from the sequence $A_k = (x_1, \dots, x_k)$ we construct a new sequence A_{k+1} in the following way.

1. We choose a partition $\{1, \dots, n\} = I \cup J$, where I and J are two disjoint sets, such that the expression

$$\left| \sum_{i \in I} x_i - \sum_{j \in J} x_j \right|$$

attains the smallest value. (We allow I or J to be empty; in this case the corresponding sum is 0.) If there are several such partitions, one is chosen arbitrarily.

2. We set $A_{k+1} = (y_1, \dots, y_n)$ where $y_i = x_i + 1$ if $i \in I$, and $y_i = x_i - 1$ if $i \in J$.

Prove that for some k , the sequence A_k contains an element x such that $|x| \geq \frac{n}{2}$.

Author: Omid Hatami, Iran

- 5 In the Cartesian coordinate plane define the strips $S_n = \{(x, y) | n \leq x < n+1\}$, $n \in \mathbb{Z}$ and color each strip black or white. Prove that any rectangle which is not a square can be placed in the plane so that its vertices have the same color.

IMO Shortlist 2007 Problem C5 as it appears in the official booklet:

In the Cartesian coordinate plane define the strips $S_n = \{(x, y) | n \leq x < n+1\}$ for every integer n . Assume each strip S_n is colored either red or blue, and let a and b be two distinct positive integers. Prove that there exists a rectangle with side length a and b such that its vertices have the same color.

Author: Radu Gologan and Dan Schwarz, Romania

- 6 In a mathematical competition some competitors are friends. Friendship is always mutual. Call a group of competitors a *clique* if each two of them are

friends. (In particular, any group of fewer than two competitors is a clique.) The number of members of a clique is called its *size*.

Given that, in this competition, the largest size of a clique is even, prove that the competitors can be arranged into two rooms such that the largest size of a clique contained in one room is the same as the largest size of a clique contained in the other room.

Author: Vasily Astakhov, Russia

- 7 Let $\alpha < \frac{3-\sqrt{5}}{2}$ be a positive real number. Prove that there exist positive integers n and $p > \alpha \cdot 2^n$ for which one can select $2 \cdot p$ pairwise distinct subsets $S_1, \dots, S_p, T_1, \dots, T_p$ of the set $\{1, 2, \dots, n\}$ such that $S_i \cap T_j \neq \emptyset$ for all $1 \leq i, j \leq p$

Author: Gerhard Wginger, Austria

- 8 Given is a convex polygon P with n vertices. Triangle whose vertices lie on vertices of P is called *good* if all its sides are equal in length. Prove that there are at most $\frac{2n}{3}$ *good* triangles.

Author: Vyacheslav Yasinskiy, Ukraine

— Geometry

- 1 In triangle ABC the bisector of angle BCA intersects the circumcircle again at R , the perpendicular bisector of BC at P , and the perpendicular bisector of AC at Q . The midpoint of BC is K and the midpoint of AC is L . Prove that the triangles RPK and RQL have the same area.

Author: Marek Pechal, Czech Republic

- 2 Denote by M midpoint of side BC in an isosceles triangle $\triangle ABC$ with $AC = AB$. Take a point X on a smaller arc \widehat{MA} of circumcircle of triangle $\triangle ABM$. Denote by T point inside of angle BMA such that $\angle TMX = 90$ and $TX = BX$. Prove that $\angle MTB - \angle CTM$ does not depend on choice of X .

Author: Farzan Barekat, Canada

- 3 The diagonals of a trapezoid $ABCD$ intersect at point P . Point Q lies between the parallel lines BC and AD such that $\angle AQD = \angle CQB$, and line CD separates points P and Q . Prove that $\angle BQP = \angle DAQ$.

Author: Vyacheslav Yasinskiy, Ukraine

- 4 Consider five points A, B, C, D and E such that $ABCD$ is a parallelogram and $BCED$ is a cyclic quadrilateral. Let ℓ be a line passing through A . Suppose that ℓ intersects the interior of the segment DC at F and intersects line BC at G . Suppose also that $EF = EG = EC$. Prove that ℓ is the bisector of angle DAB .

Author: Charles Leytem, Luxembourg

- 5 Let ABC be a fixed triangle, and let A_1, B_1, C_1 be the midpoints of sides BC, CA, AB , respectively. Let P be a variable point on the circumcircle. Let lines PA_1, PB_1, PC_1 meet the circumcircle again at A', B', C' , respectively. Assume that the points A, B, C, A', B', C' are distinct, and lines AA', BB', CC' form a triangle. Prove that the area of this triangle does not depend on P .

Author: Christopher Bradley, United Kingdom

- 6 Determine the smallest positive real number k with the following property. Let $ABCD$ be a convex quadrilateral, and let points A_1, B_1, C_1 , and D_1 lie on sides AB, BC, CD , and DA , respectively. Consider the areas of triangles $AA_1D_1, BB_1A_1, CC_1B_1$ and DD_1C_1 ; let S be the sum of the two smallest ones, and let S_1 be the area of quadrilateral $A_1B_1C_1D_1$. Then we always have $kS_1 \geq S$.

Author: Zuming Feng and Oleg Golberg, USA

- 7 Given an acute triangle ABC with $\angle B > \angle C$. Point I is the incenter, and R the circumradius. Point D is the foot of the altitude from vertex A . Point K lies on line AD such that $AK = 2R$, and D separates A and K . Lines DI and KI meet sides AC and BC at E, F respectively. Let $IE = IF$.

Prove that $\angle B \leq 3\angle C$.

Author: Davoud Vakili, Iran

- 8 Point P lies on side AB of a convex quadrilateral $ABCD$. Let ω be the incircle of triangle CPD , and let I be its incenter. Suppose that ω is tangent to the incircles of triangles APD and BPC at points K and L , respectively. Let lines AC and BD meet at E , and let lines AK and BL meet at F . Prove that points E, I , and F are collinear.

— Number Theory

1 Find all pairs of natural numbers (a, b) such that $7^a - 3^b$ divides $a^4 + b^2$.

Author: Stephan Wagner, Austria

2 Let $b, n > 1$ be integers. Suppose that for each $k > 1$ there exists an integer a_k such that $b - a_k^n$ is divisible by k . Prove that $b = A^n$ for some integer A .

Author: Dan Brown, Canada

3 Let X be a set of 10,000 integers, none of them is divisible by 47. Prove that there exists a 2007-element subset Y of X such that $a - b + c - d + e$ is not divisible by 47 for any $a, b, c, d, e \in Y$.

Author: Gerhard Wginger, Netherlands

4 For every integer $k \geq 2$, prove that 2^{3k} divides the number

$$\binom{2^{k+1}}{2^k} - \binom{2^k}{2^{k-1}}$$

but 2^{3k+1} does not.

Author: Waldemar Pompe, Poland

5 Find all surjective functions $f : \mathbb{N} \rightarrow \mathbb{N}$ such that for every $m, n \in \mathbb{N}$ and every prime p , the number $f(m + n)$ is divisible by p if and only if $f(m) + f(n)$ is divisible by p .

Author: Mohsen Jamaali and Nima Ahmadi Pour Anari, Iran

6 Let k be a positive integer. Prove that the number $(4 \cdot k^2 - 1)^2$ has a positive divisor of the form $8kn - 1$ if and only if k is even.

Actual IMO 2007 Problem, posed as question 5 in the contest, which was used as a lemma in the official solutions for problem N6 as shown above. (<http://www.mathlinks.ro/viewtopic.php?p=89465#894656>)

Author: Kevin Buzzard and Edward Crane, United Kingdom

2007 IMO Shortlist

7

For a prime p and a given integer n let $\nu_p(n)$ denote the exponent of p in the prime factorisation of $n!$. Given $d \in \mathbb{N}$ and $\{p_1, p_2, \dots, p_k\}$ a set of k primes, show that there are infinitely many positive integers n such that $d \mid \nu_{p_i}(n)$ for all $1 \leq i \leq k$.
