

### Romania Team Selection Test 2010

- TST 1
- 
- 1** Given an integer number  $n \geq 3$ , consider  $n$  distinct points on a circle, labelled 1 through  $n$ .  
Determine the maximum number of closed chords  $[ij]$ ,  $i \neq j$ , having pairwise non-empty intersections.  
*Jnos Pach*
- 
- 2** Let  $n$  be a positive integer number and let  $a_1, a_2, \dots, a_n$  be  $n$  positive real numbers. Prove that  $f : [0, \infty) \rightarrow \mathbb{R}$ , defined by
- $$f(x) = \frac{a_1 + x}{a_2 + x} + \frac{a_2 + x}{a_3 + x} + \dots + \frac{a_{n-1} + x}{a_n + x} + \frac{a_n + x}{a_1 + x},$$
- is a decreasing function.  
*Dan Marinescu et al.*
- 
- 3** Two rectangles of unit area overlap to form a convex octagon. Show that the area of the octagon is at least  $\frac{1}{2}$ .  
*Kvant Magazine*
- 
- 4** Two circles in the plane,  $\gamma_1$  and  $\gamma_2$ , meet at points  $M$  and  $N$ . Let  $A$  be a point on  $\gamma_1$ , and let  $D$  be a point on  $\gamma_2$ . The lines  $AM$  and  $AN$  meet again  $\gamma_2$  at points  $B$  and  $C$ , respectively, and the lines  $DM$  and  $DN$  meet again  $\gamma_1$  at points  $E$  and  $F$ , respectively. Assume the order  $M, N, F, A, E$  is circular around  $\gamma_1$ , and the segments  $AB$  and  $DE$  are congruent. Prove that the points  $A, F, C$  and  $D$  lie on a circle whose centre does not depend on the position of the points  $A$  and  $D$  on the respective circles, subject to the assumptions above.  
\*\*\*
- 
- 5** Let  $a$  and  $n$  be two positive integer numbers such that the (positive) prime factors of  $a$  be all greater than  $n$ .  
Prove that  $n!$  divides  $(a - 1)(a^2 - 1) \dots (a^{n-1} - 1)$ .  
*AMM Magazine*

– TST 2

- 1 Given a positive integer number  $n$ , determine the minimum of

$$\max \left\{ \frac{x_1}{1+x_1}, \frac{x_2}{1+x_1+x_2}, \dots, \frac{x_n}{1+x_1+x_2+\dots+x_n} \right\},$$

as  $x_1, x_2, \dots, x_n$  run through all non-negative real numbers which add up to 1.

*Kvant Magazine*

- 2 (a) Given a positive integer  $k$ , prove that there do not exist two distinct integers in the open interval  $(k^2, (k+1)^2)$  whose product is a perfect square.  
 (b) Given an integer  $n > 2$ , prove that there exist  $n$  distinct integers in the open interval  $(k^n, (k+1)^n)$  whose product is the  $n$ -th power of an integer, for all but a finite number of positive integers  $k$ .

*AMM Magazine*

- 3 Let  $\gamma_1$  and  $\gamma_2$  be two circles tangent at point  $T$ , and let  $\ell_1$  and  $\ell_2$  be two lines through  $T$ . The lines  $\ell_1$  and  $\ell_2$  meet again  $\gamma_1$  at points  $A$  and  $B$ , respectively, and  $\gamma_2$  at points  $A_1$  and  $B_1$ , respectively. Let further  $X$  be a point in the complement of  $\gamma_1 \cup \gamma_2 \cup \ell_1 \cup \ell_2$ . The circles  $ATX$  and  $BTX$  meet again  $\gamma_2$  at points  $A_2$  and  $B_2$ , respectively. Prove that the lines  $TX$ ,  $A_1B_2$  and  $A_2B_1$  are concurrent.

\*\*\*

- 4 Let  $n$  be an integer number greater than or equal to 2, and let  $K$  be a closed convex set of area greater than or equal to  $n$ , contained in the open square  $(0, n) \times (0, n)$ . Prove that  $K$  contains some point of the integral lattice  $\mathbb{Z} \times \mathbb{Z}$ .

*Marius Cavachi*

– TST 3

- 1 Let  $n$  be a positive integer and let  $x_1, x_2, \dots, x_n$  be positive real numbers such that  $x_1 x_2 \cdots x_n = 1$ . Prove that

$$\sum_{i=1}^n x_i^n (1+x_i) \geq \frac{n}{2^{n-1}} \prod_{i=1}^n (1+x_i).$$

*IMO Shortlist*

- 2 Let  $ABC$  be a triangle such that  $AB \neq AC$ . The internal bisector lines of the angles  $ABC$  and  $ACB$  meet the opposite sides of the triangle at points  $B_0$  and

$C_0$ , respectively, and the circumcircle  $ABC$  at points  $B_1$  and  $C_1$ , respectively. Further, let  $I$  be the incentre of the triangle  $ABC$ . Prove that the lines  $B_0C_0$  and  $B_1C_1$  meet at some point lying on the parallel through  $I$  to the line  $BC$ .

*Radu Gologan*

- 3** Given a positive integer  $a$ , prove that  $\sigma(am) < \sigma(am + 1)$  for infinitely many positive integers  $m$ . (Here  $\sigma(n)$  is the sum of all positive divisors of the positive integer number  $n$ .)

*Vlad Matei*

- 4** Let  $X$  and  $Y$  be two finite subsets of the half-open interval  $[0, 1)$  such that  $0 \in X \cap Y$  and  $x + y = 1$  for no  $x \in X$  and no  $y \in Y$ . Prove that the set  $\{x + y - \lfloor x + y \rfloor : x \in X \text{ and } y \in Y\}$  has at least  $|X| + |Y| - 1$  elements.

\*\*\*

— TST 4 (All Geometry)

- 1** Let  $P$  be a point in the plane and let  $\gamma$  be a circle which does not contain  $P$ . Two distinct variable lines  $\ell$  and  $\ell'$  through  $P$  meet the circle  $\gamma$  at points  $X$  and  $Y$ , and  $X'$  and  $Y'$ , respectively. Let  $M$  and  $N$  be the antipodes of  $P$  in the circles  $PXX'$  and  $PYY'$ , respectively. Prove that the line  $MN$  passes through a fixed point.

*Mihai Chis*

- 2** Let  $ABC$  be a scalene triangle. The tangents at the perpendicular foot dropped from  $A$  on the line  $BC$  and the midpoint of the side  $BC$  to the nine-point circle meet at the point  $A'$ ; the points  $B'$  and  $C'$  are defined similarly. Prove that the lines  $AA'$ ,  $BB'$  and  $CC'$  are concurrent.

*Gazeta Matematica*

- 3** Let  $\mathcal{L}$  be a finite collection of lines in the plane in general position (no two lines in  $\mathcal{L}$  are parallel and no three are concurrent). Consider the open circular discs inscribed in the triangles enclosed by each triple of lines in  $\mathcal{L}$ . Determine the number of such discs intersected by no line in  $\mathcal{L}$ , in terms of  $|\mathcal{L}|$ .

*B. Aronov et al.*

— TST 5

- 1 Each point of the plane is coloured in one of two colours. Given an odd integer number  $n \geq 3$ , prove that there exist (at least) two similar triangles whose similitude ratio is  $n$ , each of which has a monochromatic vertex-set.

*Vasile Pop*

- 2 Let  $\ell$  be a line, and let  $\gamma$  and  $\gamma'$  be two circles. The line  $\ell$  meets  $\gamma$  at points  $A$  and  $B$ , and  $\gamma'$  at points  $A'$  and  $B'$ . The tangents to  $\gamma$  at  $A$  and  $B$  meet at point  $C$ , and the tangents to  $\gamma'$  at  $A'$  and  $B'$  meet at point  $C'$ . The lines  $\ell$  and  $CC'$  meet at point  $P$ . Let  $\lambda$  be a variable line through  $P$  and let  $X$  be one of the points where  $\lambda$  meets  $\gamma$ , and  $X'$  be one of the points where  $\lambda$  meets  $\gamma'$ . Prove that the point of intersection of the lines  $CX$  and  $C'X'$  lies on a fixed circle.

*Gazeta Matematica*

- 3 Let  $p$  be a prime number, let  $n_1, n_2, \dots, n_p$  be positive integer numbers, and let  $d$  be the greatest common divisor of the numbers  $n_1, n_2, \dots, n_p$ . Prove that the polynomial

$$\frac{X^{n_1} + X^{n_2} + \dots + X^{n_p} - p}{X^d - 1}$$

is irreducible in  $\mathbb{Q}[X]$ .

*Beniamin Bogosel*

– TST 6

- 1 A nonconstant polynomial  $f$  with integral coefficients has the property that, for each prime  $p$ , there exist a prime  $q$  and a positive integer  $m$  such that  $f(p) = q^m$ . Prove that  $f = X^n$  for some positive integer  $n$ .

*AMM Magazine*

- 2 Let  $ABC$  be a scalene triangle, let  $I$  be its incentre, and let  $A_1, B_1$  and  $C_1$  be the points of contact of the excircles with the sides  $BC, CA$  and  $AB$ , respectively. Prove that the circumcircles of the triangles  $AIA_1, BIB_1$  and  $CIC_1$  have a common point different from  $I$ .

*Cezar Lupu & Vlad Matei*

- 3 Let  $n$  be a positive integer number. If  $S$  is a finite set of vectors in the plane, let  $N(S)$  denote the number of two-element subsets  $\{\mathbf{v}, \mathbf{v}'\}$  of  $S$  such that

$$4(\mathbf{v} \cdot \mathbf{v}') + (|\mathbf{v}|^2 - 1)(|\mathbf{v}'|^2 - 1) < 0.$$

# Art of Problem Solving

## 2010 Romania Team Selection Test

Determine the maximum of  $N(S)$  when  $S$  runs through all  $n$ -element sets of vectors in the plane.

\*\*\*
