---

## Day 1

- 1 Prove that from a set of ten distinct two-digit numbers, it is always possible to find two disjoint subsets whose members have the same sum.
- 2 Given  $n > 4$ , prove that every cyclic quadrilateral can be dissected into  $n$  cyclic quadrilaterals.
- 3 Prove that  $(2m)!(2n)!$  is a multiple of  $m!n!(m+n)!$  for any non-negative integers  $m$  and  $n$ .

## Day 2

1 Find all positive real solutions to:

$$\begin{aligned} (x_1^2 - x_3x_5)(x_2^2 - x_3x_5) &\leq 0(x_2^2 - x_4x_1)(x_3^2 - x_4x_5) \\ 0(x_3^2 - x_5x_2)(x_4^2 - x_5x_2) &\leq 0(x_4^2 - x_1x_3)(x_5^2 - x_1x_5) \\ 0(x_5^2 - x_2x_4)(x_1^2 - x_2x_4) &\leq 0 \end{aligned}$$

(0)

$f$  and  $g$  are real-valued functions defined on the real line. For all  $x$  and  $y$ ,  $f(x+y) + f(x-y) = 2f(x)g(y)$ .  $f$  is not identically zero and  $|f(x)| \leq 1$  for all  $x$ . Prove that  $|g(x)| \leq 1$  for all  $x$ .

Given four distinct parallel planes, prove that there exists a regular tetrahedron with a vertex on each plane.
